Education : BS (Information Technology 4 years honors 3.09 GPA Out Of 4 | **MOFA Attested**)

Location : **Dubai**

ABOUT

Full Stack Development and AI solutions, specializing in scalable, high-performance web microservices and intelligent automation systems. Proficient in Java, Spring Boot, Java Spring Boot, NestJS, Python, React.js, Next.js, Angular, JavaScript (ES6+), TypeScript, JWT, OAuth2 and Unit Testing. Experienced in AI Agents, LLM Integration, OpenAI, RAG, Databricks, AVEVA Connect, microservices architecture, Docker, Kubernetes, CI/CD (Jenkins, Git), SonarQube, and AWS EKS. Skilled in MongoDB, PostgreSQL, MySQL, Firebase, AWS, Azure, GraphQL, Kafka, RabbitMQ, and Agile methodologies (JIRA). Passionate about delivering clean, scalable, and AI-driven solutions.

Technical Skill

Back End Tech Stack:

Java, Spring Boot, Python, Java Spring Boot, OpenShift, Kubernetes (K8s), REST & SOAP APIs, Microservices, Domain-Driven Design (DDD), Event-Driven Architecture, Solace Messaging, Saga Patterns, Design Patterns, API Gateway, Service Registry, API Versioning, Database-per-Service, Resilience4j (Circuit Breaker, Retry, Bulkhead), Observability & Monitoring using elastic stack.

AI & Automation Tools: Python, FastAPI, OpenAI API, Azure OpenAI, LangChain, Langgraph, n8n, Powerautomate, AI Agents, Agentic AI, Retrieval-Augmented Generation (RAG), LLM Integration, Prompt Engineering

Frontend Tech Stack: React.js, Angular, Next.js, JavaScript (ES6+), TypeScript, HTML, CSS.

Database Technologies: MySQL, Oracle, SQL Server, PostgreSQL, Firebase, MongoDB.

Cloud & DevOps: AWS, MS Azure, Git, Docker, OpenShift, Kubernetes, Jenkins.

Quality Application Monitoring: SonarQube, ESLint, Elastic Stack..

Agile Methodologies & Tools: Scrum, JIRA, Confluence, Trello.

Certifications: Python Basics, Python Functions, Files, and Dictionaries & Introduction to Data Science in Python

Employment History

- **Al-Ghurair Investment (AGI)** Sr. Full Stack Developer & Technical Lead October 1st till now
- **IMC** (Sr. Full Stack Developer July 2022 July 2025)
- **Emaar** (Full Stack Developer Oct 2021 to June 2022)
- **Uxbert** (Full Stack Developer Aug 2020 Sep 2021)

- **Emirates Airline** (Full Stack Developer May 2019 to July 2020)
- **Centric Source** (Senior Software Engineer January 2018 to April 2019)
- **Tamkeen Technologies** (Senior Software Engineer January 2014 to December 2017)
- **GadiTek** (Senior Software Engineer April 2012 to December 2013)

My Projects

Buddy's App Al Ghurair Investment

Designed and developed the backend architecture and microservices for the **Buddy App**, a digital self-service platform for **10,000+ taxi drivers**. Built scalable microservices using **Java**, **Spring Boot**, and **MongoDB**, with a multi-layer integration architecture where Java Spring Boot services communicate with **Boomi**, which synchronizes data with **Microsoft Dynamics 365**. Delivered features including driver onboarding/offboarding, leave management, accident reporting, earnings dashboards (daily, monthly, yearly), and profile management. Implemented **Azure DevOps CI/CD** pipelines and deployed containerized services on **Amazon EKS (Kubernetes)** to ensure scalability, reliability, and high availability.

Key Achievements

- Digitized driver operations for **10,000+ drivers**, significantly reducing office visits and manual administrative workload.
- Automated HR and operational workflows, including onboarding, offboarding, leave requests, and accident reporting.

Built a scalable microservices platform with seamless **Boomi–Microsoft Dynamics 365** integration for reliable enterprise data synchronization.

AI/ML Canola Oil Crush Optimization – Canola Oil Refinery

Implemented an AI-driven predictive analytics solution for refinery crush optimization using historical data from AVEVA Connect.

Designed scalable ML pipelines in Databricks for data ingestion, preprocessing, model development, evaluation, and deployment.

Embedded predictive models into AVEVA Connect dashboards to deliver real-time forecasting, operational insights, and intelligent decision support.

Enabled data-driven optimization of refinery operations by identifying performance trends and predicting future process outcomes.

Tech Stack: Python, Databricks, Machine Learning, Scikit-learn, Pandas, SQL, AVEVA Connect, Predictive Analytics.

Key Achievements:

- Increased crush yield.
- Reduced production downtime.
- Improved forecast accuracy.
- Reduced manual reporting effort.
- Processed **X million** sensor records daily.

Emirates Airline

Contributed to developing and optimizing the Emirates Core Booking Website, enhancing performance, reliability, and user experience for millions of global users.

Backend Development

Server-side logic using Java, Spring Boot, ensuring secure and high-performance processing of booking data. Enhanced backend systems to support large-scale user traffic.

Frontend : React.js, Carbon React.js, React Storybook Components.

Third-Party Integration

Integrated multiple third-party APIs and services to expand platform capabilities, such as payment gateways, customer service tools, and flight information systems.

Implemented comprehensive unit and integration testing to ensure functionality and reliability under heavy usage. Conducted rigorous code reviews to maintain high-quality standards.

Continuous Deployment

Developed and managed CI/CD pipelines to enable smooth and automated deployment processes across various environments.

Mitigated risks during production rollouts with strategic planning and validation.

Impact

The enhanced Emirates Booking Website has elevated the customer experience by offering fast, reliable, and user-friendly functionality, supporting Emirates' position as a leader in the aviation industry. Implemented responsive user interfaces using modern front-end frameworks.

IMC Patient-Portal Web + Mobile Apps + API (Inpatient + Telehealth)

Successfully designed, developed, and deployed a comprehensive Patient Portal web application and mobile applications for the International Medical Center (IMC), integrated with **InterSystems**

TrakCare to deliver secure digital healthcare services. The platform enables appointment booking, telehealth consultations, patient self-services, and government identity verification.

Role & Responsibilities:

- Designed and developed scalable backend services and REST APIs using **Java Spring Boot**.
- Developed responsive and intuitive user interfaces using **React.js**.
- Integrated **InterSystems TrakCare**, **Twilio** (telehealth, SMS, and notifications), and **ELM** services for government identity verification.
- Designed and optimized database structures and queries to improve application performance.
- Implemented unit and integration testing to ensure application reliability.
- Built and maintained CI/CD pipelines for automated deployment.
- Troubleshoot and resolved production issues while maintaining high application availability.
- Collaborated with cross-functional teams to translate business requirements into scalable technical solutions.
- Conducted code reviews, maintained technical documentation, and enforced coding standards.

Key Achievements

- Enabled 45% of patient appointments to be booked via the mobile apps and chatbot, significantly improving digital adoption and operational efficiency.

Technologies: Java, Spring Boot, React.js, React Native, REST APIs, InterSystems TrakCare, Twilio, ELM, SQL, CI/CD, Git.

URL: <https://patientportal.imc.med.sa/>

Telemedicine Doctor Portal

IMC (Full Stack Developer)

Developed and deployed a secure **Telemedicine Doctor Portal** enabling doctors to conduct video consultations, live chat with patients, upload prescriptions and medical documents, and manage virtual appointments. Integrated **Twilio** for real-time video conferencing and chat, and implemented **LDAP authentication** for secure doctor login. Built a scalable full-stack solution using **Java Spring Boot** and **React.js**, ensuring seamless integration with the hospital ecosystem.

Role & Responsibilities:

- Developed RESTful APIs using **Java Spring Boot** and responsive interfaces with **React.js**.
- Integrated **Twilio** for video calling, live chat, and real-time communication.
- Implemented secure **LDAP-based authentication** for healthcare professionals.
- Developed file upload and prescription management features.
- Optimized database performance implemented CI/CD pipelines and resolved production issues.

Collaborated with clinical and business teams to deliver a secure, reliable telemedicine platform.

URL: <https://whealth.imc.med.sa:9443/doctor-portal/>

Clipboard Health Facility App

Contributed to the development and maintenance of the Clipboard Health Facility App, including web and mobile platforms used by healthcare facilities for workforce and shift management.

Developed and enhanced backend services using **Java Spring Boot**, including RESTful API development and system integrations.

Built and maintained frontend features using React.js and Redux for both desktop and mobile experiences.

Worked on Ionic-based mobile applications and optimized MongoDB database operations for performance and scalability.

Resolved production issues, implemented new features, and collaborated with cross-functional teams in an Agile environment.

Achievement:

Improved platform stability, reduced production issues, and delivered feature enhancements that support efficient healthcare facility operations.

Automated Employee Sync | MSDynamics 365, Airtable, Power Automate

Developed an automated employee synchronization solution between **Microsoft Dynamics 365 CRM** and **Airtable** using **Microsoft Power Automate**.

Automated employee creation and updates, eliminating manual data entry and ensuring real-time data consistency.

Achievement:

Reduced HR operational effort, minimized human errors, and streamlined the employee's onboarding process.

Patient Transfer

Developed a role-based patient transfer system using Java, Spring Boot, React.js, and Angular, enabling secure patient transfer requests with multi-level approval workflows (FSP → MRP → Admission Office).

Designed and integrated REST APIs, optimized database operations, and implemented CI/CD pipelines with third-party integrations.

Achievement:

Digitized and automated the patient transfer process, eliminating manual records, accelerating approvals, and improving operational efficiency.

URL: <http://patienttransfer.imc.med.sa/>

inquire Web Consoles.

Developed and maintained a web-based administration portal for **SpexLive**, enabling efficient management of product data and business operations.

Built scalable backend services using **PHP Laravel** and developed responsive frontend features with **React.js** and **Redux**.

Designed and optimized **MySQL** database operations to improve application performance and reliability.

Participated in Agile development, including daily Scrum meetings, code reviews, bug fixing, and feature enhancements.

Achievement: Delivered scalable, high-performance administrative features that improved operational efficiency and streamlined business management.

URL: <https://admin.spexlive.net/>

Inquire Consumer Web**Etilize GFK (Software Engineer)**

Advanced web-based administration consoles for Etilize's new line of business offerings for the management of SpexLive.

Technologies: Java, Spring Boot, AJAX, Servlet, JSP, JSTL, HTML, CSS, Prototype Scriptaculous Framework, Amazon EC2 Server.

Role & Responsibilities:

requirements gathering and develop web application.

URL: <https://spexlive.net/re>

GSA Live**Uxbert (Full Stack Developer)**

GSA Live is a digital streaming platform owned and operated by the Saudi Arabian Ministry of Sports. Launched in 2020, it serves as an official channel for broadcasting live sports events and providing related content to audiences within Saudi Arabia.

Role & Responsibilities:

Work both desktop and mobile app.

Fix production issues and develop new backend API.

Frontends develop in React Redux.

DB used in MySQL.

URL: <https://gsa.live/en>

Project Management Application (PMP-Connect)**Emaar (Full Stack Developer)**

Project management application similar to monday.com.

Manage Projects, Manage Milestone and Manage Tasks,

Manage Calendar and tasks, Manage Kanban.

Role & Responsibilities:

Frontend development using React and redux with responsive in mobile and desktop.

API Development using NodeJS.

Work on desktop and mobile app.

Deployment and CICD pipeline created in azure cloud.

Database tables and function created on PostgreSQL.

URL: <https://pmoclientstage.azurewebsites.net/>

Employment and Training System

Tamkeen Technologies (Senior Software Engineer)

Worked on a Saudi Govt level large scale project, for employment subsidy program more than 350 database tables.

Which was built to provide subsidy to any employ working in Saudi Arabia in terms of salary and training. This application had following modules.

1) HR management 2) Invoicing system to subsidies employ salary or training program.

Technologies: PHP, Laravel, jQuery, HTML, CSS, and MySQL Database.

I have also integrated with this system with Government organization application through their SOAP web services API.

Role & Responsibilities:

requirements gathering and develop web application.

URL: <https://www.hrdf.org.sa/>

VPN E-Commerce Website

GadiTek (Senior Software Engineer)

Create Tourism E-Commerce Website.

Technologies: PHP, Pay pall, UKash, Authorise.net, JavaScript, jQuery, XHTML, CSS, and MySQL Database.

Role & Responsibilities:

requirements gathering and develop web application.

URL: <http://www.tuvpn.com>

Hallayala

Hala Yalla is Saudi Arabia's first Super App dedicated to sports, entertainment, culture, and community engagement.

Role & Responsibilities

Work both desktop and mobile app.

Backend API development.

Frontend develop in React Redux. Database Tables creation

URL: <https://www.halayalla.com/sa-en>

Pakistan Telecommunication Website (PTCL)

URL: <http://www.ptcl.com.pk>

Created dynamic websites for PTCL and provincial assemblies of Pakistan.

Technologies: PHP, XHTML, CSS, JavaScript, and MySQL Database.

Role & Responsibilities:

requirements gathering and develop web application.
